CLAIM AMENDMENTS

 (Currently amended) In a data processing system executing tasks in different time partitions, a method of scheduling tasks comprising:

determining available slack; and

allocating slack to tasks in different time partitions; and

wherein the tasks that are allocated slack are aperiodic, non-essential tasks.

(Cancelled)

- (Currently amended) The method of claim [[2]] 1 wherein the tasks comprise essential
 and non-essential tasks, and wherein the tasks that are allocated slack are from the group
 consisting of new non-essential tasks and enhancements to essential tasks.
- (Original) The method of claim 1 wherein in determining, both timeline slack and reclaimed slack are determined.
- (Currently amended) A machine-readable medium having instructions stored thereon capable of causing a processor to carry out a method, the method comprising:

scheduling tasks to execute in different time partitions:

determining available slack; and

allocating slack to tasks in different time partitions, wherein the tasks that are allocated slack are aperiodic, non-essential tasks.

McDoweu, Bos-nen Husert & Bers-off LLP 300 South Woder Dive Choug, Lunos 60606 Telephone (312) 913 0001

MBHB: 06461 A S/N 09/751/834 FUNDDATE 29 DECEMBER 2000 6. (Currently amended) In a data processing system executing tasks in different time

partitions, a method of scheduling tasks comprising:

collecting unscheduled execution time from at least one time partition; and,

allocating the unscheduled execution time to a task in another time partition, wherein

the task in the other partition is an aperiodic, non-essential task.

7 (Cancelled)

8. (Currently amended) The method of claim [[7]] 6, wherein the tasks comprise

essential and non-essential tasks, and wherein the task in the other partition is from the group

consisting of new non-essential tasks and enhancements to essential tasks.

9. (Original) The method of claim 6, wherein in collecting unscheduled execution time.

both timeline slack and reclaimed slack are collected.

10. (Currently amended) A machine-readable medium having instructions stored thereon

capable of causing a processor to carry out a method, the method comprising:

scheduling tasks to execute in different time partitions:

collecting unscheduled execution time from at least one time partition; and

allocating the unscheduled execution time to [[a]] an aperiodic, non-essential task in

another time partition.

FUNCTION: 29 DECEMBER, 2000

3

 (Currently amended) In a time-partitioned system executing essential and nonessential tasks, a method of scheduling tasks comprising:

determining available slack from the group consisting of timeline slack and reclaimed slack:

pooling available slack in a common slack pool; and allocating slack from the common slack pool to tasks; and wherein in allocating, slack is allocated to non-essential tasks.

(Cancelled)

- (Original) The method of claim 11, wherein in allocating, slack is allocated to a task from the group consisting of new non-essential tasks and enhancements to essential tasks.
- 14. (Currently amended) A machine-readable medium having instructions stored thereon capable of causing a processor to carry out a method, the method comprising:

scheduling tasks to execute in different time partitions;

determining available slack from the group consisting of timeline slack and reclaimed slack:

pooling available slack in a common slack pool; and allocating slack from the common slack pool to aperiodic, non-essential tasks.

15. (Currently amended) In a time-partitioned system executing essential and non-essential tasks, a method of scheduling tasks comprising:

determining available timeline slack;

determining available reclaimed slack:

pooling available timeline and reclaimed slack; and

allocating slack to a non-essential task in any time partition.

(Cancelled).

17. (Original) The method of claim 15, wherein in allocating, slack is allocated to a task

from the group consisting of new non-essential tasks and enhancements to essential tasks.

18. (Currently amended) A machine-readable medium having instructions stored thereon

capable of causing a processor to carry out a method, the method comprising:

scheduling tasks to execute in different time partitions:

determining available timeline slack;

determining available reclaimed slack;

pooling available timeline and reclaimed slack; and

allocating slack to a non-essential task in any time partition.

(Currently amended) A time-partitioned system comprising:

a processor;

a plurality of tasks operating on the processor, wherein each task of the plurality of

tasks is of a task type selected from the group consisting of essential and non-esssential,

wherein each task of the plurality of tasks has associated with it at least one worst case.

McDoweu, Bos-nen Husert & Bers-off LLP 300 South Woder Dave Choug, Lunos 60606 Telephone (312) 913 0001

MBHB: 06461A S/N 09/751/834 FLINGDATE 29 DECEMBER 2000 execution time; and

an executive in communication with the processor and controlling dispatching of

tasks on the processor, wherein the executive comprises:

a first module that determines available slack; and

a second module that allocates available slack to non-essential tasks in different time

partitions.

20 (Previously Presented) The time-partitioned system of claim 19, wherein the first

module determines available slack by determining slack from the group consisting of timeline

slack, reclaimed slack, and idle time.

21. (Previously Presented) The time-partitioned system of claim 20, wherein the first

module maintains a pool of available slack.

22. (Previously Presented) The time-partitioned system of claim 20, wherein the first

module maintains a common pool of available slack that can be used by tasks in any time

partition.

23. (Cancelled)

24. (Original) The time-partitioned system of claim 23, wherein the tasks are from the

group consisting of new non-essential tasks and enhancements to essential tasks.

McDowney, Bos-New Hussert & Berg-off LLP 300 South Wyder Drive CHCASS, LUNOS 60606 TELEPHONE (312) 913 0001

FUNCTION: 29 DECEMBER, 2000

6

25. (Previously Presented) The time-partitioned system of claim 23, wherein the executive

further comprises a third module that assigns different priority levels to tasks.

26. (Previously Presented) The time-partitioned system of claim 25, wherein the first

module determines available slack for tasks at each priority level.

27. (Original) The time-partitioned system of claim 25, wherein the second module

allocates available slack to tasks in order of priority.

28. (Original) The time-partitioned system of claim 19, wherein the system is a flight

control system.

29. (Original) The time-partitioned system of claim 19, wherein the system is a real-time

control system.

30. (Original) The time partitioned system of claim 19, wherein the executive comprises a

single set of slack variables and a single slack table.
